BRAKE DISCS AND BRAKE PADS CATALOGUE 2014

WELCOME | TO TAROX

- Linea Freni Speciali

(Performance brakes to me and you)

TAROX's ability to solve braking problems quickly opened the door to the premier class of car racing when Didier Pironi won the 1980 Formula 1 Belgium Grand Prix, in a car equipped with the TAROX anti heat pistons. Such was his victory it caused all the leading teams to quickly switch to TAROX.

Just 2 years after their Formula 1 debut, and just 6 years after the company was established Keke Rosberg drove a TAROX equipped Williams to the 1982 World Title. Such was this achievement it quickly established the company founded in 1976 by Gianni Taroni among the top performance brake manufacturers.

Gianni Taroni's mantra 'the constant research of the ultimate braking performance' continues through the company with caliper design constantly evolving, and new applications always being added. To keep quality levels at a constant high the TAROX fast road range is TUV approved whilst the factory complies with UNI EN ISO.

TAROX BRAKE DISCS

DISCS | G88

The G88 is probably the best known of all TAROX discs and the most instantly recognisable with its multiple radial grooves machined into the disc surface using custom made machinery. These grooves are designed to generate a turbine effect which dissipates heat build up, allowing the discs to run cooler and reducing the possibility of warping, vibration or cracking. All G88 discs are based on original equipment specification, TUV approved castings, heat treated for strength, hand finished to ensure the smoothest possible braking surface and now many applications are TÜV and ABE approved by the German KBA.

DISCS | F2000

F2000 discs are the ideal solution for those who alternate the use of the car on the road with serious sessions on the track. The curved grooves on the braking surface deglaze the pads and allow the disc to run cooler. Compared to G88 the F2000 discs feature less grooves which strike the perfect balance between heat dissipation and strength ensuring they cope with even the most demanding use on track.

All F2000 discs are based on original equipment specification, TUV approved castings, heat treated for strength, hand finished to ensure the smoothest possible braking surface and now many applications are TÜV and ABE approved by the German KBA. TAROX Corsa pads are their ideal partner for track day sessions.

DISCS | SPORT JAPAN

As the name implies Sport Japan discs were originally designed for the Japanese market where tough looks and high performance are important factors. Sport Japan discs are now one of the only aftermarket performance discs to still feature fully drilled countersunk holes which are much more effective at venting gasses which cause brake fade than the more common dimples. 6 grooves on the braking surface keep pads from glazing. All Sport Japan discs are based on original equipment specification, TUV approved castings, heat treated for strength and hand finished to ensure the smoothest possible braking surface. Since 2013 many Sport Japan discs are TÜV and ABE approved by the German KBA.

DISCS | ZERO

Although plain in appearance the ZERO discs are far from an original disc. TAROX Zero discs are made from special high grade castings submitted to several levels of heat treatment. An outstanding resistance to high temperatures prevents warping and cracks. The final hand finishing leaves them incredibly smooth allowing them to mate to pads efficiently increasing life of the disc and pad.

The ZERO has proved highly successful in both circuit racing where regulations do not allow modified brake systems and group N.

Regular use in international Endurance racing saw the Zero last twice as long as a regular plain disc.

PADS | STRADA

The Strada pads are ideal for fast road use and every day driving. They work great from cold and provide immediate response without pre-heating whilst also offering a higher coefficient of friction for improved braking power, improved resistance to high temperatures and a longer service life than O.E materials. They provide an excellent pedal feel and allow full control over braking for the driver.

Capable of withstanding temperatures of up to 600°C, this pad has an optimum temperature range of 150°C to 350°C.

Coefficient of friction

$\mu_{\text{Hot}} = 0,42$
 $\mu_{\text{Typical}} = 0,37$

- Low noise in most driving conditions
- Low disc wear
- Available for most applications
- Gives a good, progressive pedal feel

PADS | CORSA

The Corsa pad is a great all – round pad, and although primarily intended for track day use, the pads can also be used to great effect for fast road use on more powerful cars. Corsa pads are still effective from cold and therefore give maximum performance at all temperatures. The high coefficient of friction gives amazing levels of pedal feel and massive amounts of bite, yet they are not hard on discs like some track type pads.

Capable of withstanding temperatures of up to 800°C, this pad has an optimum temperature range of 200°C to 600°C.

Coefficient of friction

$\mu_{\text{Hot}} = 0,49$
 $\mu_{\text{Typical}} = 0,47$

- Work from Cold
- Available for most popular high performance cars
- Steady and fade free performances
- Gives a good pedal feel
- Can be slightly noisy at low speeds and in traffic

PADS | COMPETIZIONE

Competizione (.116).

This is the compound to use for pure racing delivering reliability and performance without compromise. Featuring a high coefficient of friction, has a superior release characteristic compared to other race materials making it easier to modulate. They deliver a very hard pedal feel due to a low compressibility level and an outstanding thermal stability that ensure constant performances lap after lap.

Able to withstand temperatures of over 900°C this pad has an optimum temperature range of 300°C to 700°C.

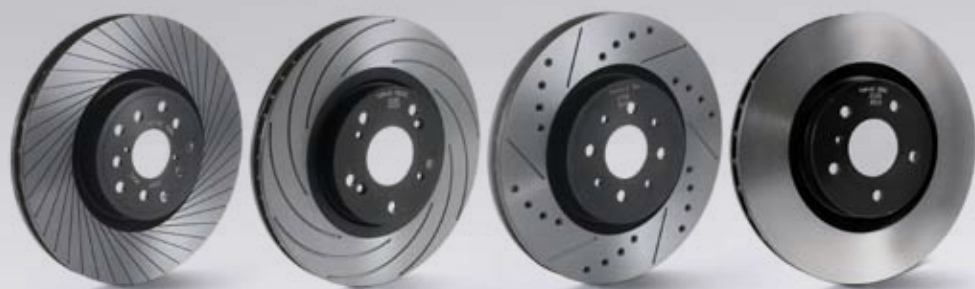

Coefficient of friction

$\mu_{\text{Hot}} = 0,53$
 $\mu_{\text{Typical}} = 0,47$

- Suitable for most high performance cars and all TAROX calipers
- Suitable to all types of competitions
- High initial bite and very consistent performance lap after lap.
- Firm pedal feel due to very low compressibility level.
- Safe but very noisy if used on the road

BRAKE DISCS

TAROX performance brake discs are sold only in pairs. Each part number compromises of a 4 digit code - this designates the correct fitment - and at the end of the part number a suffix is attached to determine which surface finish is required e.g. 2603 SJ – for drilled and grooved discs to fit a Mitsubishi Lancer Evolution VI-X.

Below is a list of the disc style suffix

- G88** G88 Multi Groove disc
- SJ** Sport Japan Drilled and slotted disc
- FMM** F2000 spiral groove disc
(usual grooves between 7-9)
- ZRO** Zero plain surface discs often referred to as group N

FITTING GUIDELINES

Ensure the new disc corresponds to the vehicle on which it is being fitted.

Always replace discs in axle sets – failure to do so can result in dangerous, uneven braking.

The hub of the vehicle should be cleaned and any traces of brake dust build up, dirt or rust removed before mounting the new discs – failure to do so can result in excessive disc run out and lead to vibration. When assembled check the run out of the disc, and if necessary, remove the disc, reclean the hub and reassemble: if this stage of fitting is not carried out correctly it can result in vibration from the discs after 3000-4000km.

TAROX guarantees the high performance of its brake discs only when installed and used correctly and will not offer a warranty on parts used on track or with a non compatible brake pads.

BEDDING IN GUIDELINES

TAROX brake discs should be run in for a period of between 500km and 600km with short smooth braking action. Sharp or heavy braking in the early stages of bedding in can cause overheating of both the disc and pad which could compromise braking performance.

TAROX does not recommend the use of pads with artificial bedding in material; this method scrubs the surface of the disc and can cause damage to TAROX balanced-hand finished discs.

BRAKE PADS

TAROX performance brake pads are sold only in axle sets. Each part number compromises of a 4 digit code - this designates the correct fitment - and at the end of the part number a suffix is attached to determine the pad compound. i.e. 0459.112 – for Strada fast road pads to fit a Audi 4.

Below is a list of the pad compound suffix

- .112** **Strada** Fast Road
- .114** **Corsa** Road and Track
- .116** **Competizione** Race

Strada (.112) Pads are available for most applications listed in this catalogue.

Corsa (.114) Pads are available for most high performance vehicles.

Competizione (.116) Pads are available for selected high performance and race cars. The same brake pad shape may be used for different cars with diverse performance. In our strive to ensure the best customer satisfaction, TAROX reserves the right to offer for sale the brake pads featuring the compound it deems most suitable for the application concerned.

It is not always possible to supply a wear indicator on performance pads. If supplied, it is only as a courtesy. If a wear indicator is required, it is often possible to transfer the existing indicator from the replaced pads. TAROX strongly recommends that customers regularly check brake pad and disc wear.

BEDDING IN GUIDELINES

Road Use

TAROX road pads should be run in for a period of between 250km and 300km – longer maybe needed if not mated to new discs - with short smooth braking action.

Sharp or heavy braking in the early stages can cause overheating of both the pad and disc which will cause the pad to 'glaze'. This will compromise braking performance.

Competition Use

For TAROX race pads we advise 20 – 30 brake applications not at full race speed while applying half pressure on the brake pedal. Stop the car check the brake discs; The surface of the brake discs should show light colouring over the full pad area. Repeat the procedure 3 – 4 times each time with increased speed. At the end of procedure brake pads should be ready to race.

All TAROX pad technical illustrations can be found at sagomario.tarox.com

NOTES

Orders are accepted according to the terms and conditions of sale which are listed at the back of this catalogue.

TAROX have provided as much information as possible relating to each individual part number and application. The specifications, technical illustrations and O.E caliper information are listed to enable you to supply the correct pad for your customer.

Part numbers, vehicle models and engine details change from time to time and although the information contained in this catalogue is, to the best of our knowledge, accurate at the time of compilation and publication, TAROX, its resellers, agents and distributors will not take responsibility for any cost in connection with fitting problems including – but not limited to – labour charges.

TERMS AND CONDITIONS OF SALE

ORDERS

All orders are accepted “subject to approval”. The price list of Taroni & C. S.a.s (“TAROX”) are ex works and exclude VAT or any applicable tax.

DESPATCH & DELIVERIES

Goods are transported at customer’s own risk even if it has been agreed by the parties they are carriage free. TAROX cannot accept liability for delay in the delivery after the goods are collected by the carrier. In the absence of customers’ instruction the order will be despatched by the method TAROX deems most suitable.

Delays in delivery or failure to deliver goods which might not be available in stock shall not make TAROX liable for payment of damages under any circumstances.

SUSPENSION OF ORDERS

Failure to pay overdue invoices, in part or in full, will entitle TAROX to withhold and/or cancel any pending order, without prejudice to any further action.

COMPLAINTS

Any notice of discrepancy, interferences, defaults and non compliances must be given to TAROX in writing within 5 working days from reception of the goods.

WARRANTY

Warranty covers all manufacturing defects. As brake components are serviceable items, any requests for warranty after the component has been fitted on to the vehicle, is subject to an inspection by TAROX or a duly authorised representative. Any warranty is automatically null and void if the brake components are used in competition.

Should any component be found to be faulty TAROX can – in it absolute discretion – decide to either replace the components or to fully refurbish them.

TAROX’ warranty only covers its brake components and expressly excludes any request of refund of any additional costs whatsoever.

The duration of the warranty is set by law at 24 month after the sale of the components. After this term all warranty claims will be automatically rejected.

RETURNS

Goods cannot be returned without TAROX prior authorisation. If a return is authorised this must be sent to TAROX carriage free.

PAYMENTS

Invoice must be paid according to the terms agreed at the moment of the order.

Late payments may be subject to statutory interests at TAROX’ own discretion.

APPLICABLE LAW

These above of term and condition of sales are governed by the Italian Law and are deemed to be accepted by the customer upon despatch of the order. For any in case of any disputes arising between the parties submitted to the jurisdiction of the Court of Lecco, although TAROX may start court proceedings at customer’s local court.
